## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 03 November 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 8-10, 16-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Sobel (US Patent 5780021).

Sobel describes a method of treating or preventing diabetes (col. 1), which inherently would reduce blood glucose, with Type I interferon using the same dosages. See claims 1-2, 4 and col. 4, lines 10+, and col. 13, lines 10-30 that particularly describes oral administration.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8-11, 16-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sobel and Cummins, Jr.

Sobel teaches all of the limitations of the claims listed and discussed in paragraph 2 above. The patentee does not teach alternate day dosing. Cummins also teaches all of the limitations of the claims except the amount and alternate day dosing. However, he does show that a daily dosage is possible, as a single dosage or as divided and administered in a multiple daily dose regimen. The reference also teaches a staggered regimen of 1-3 days per week or month as an alternative to daily dosing. See col. 5, lines 50-55. With such a flexibility as taught by the reference, and since it is common knowledge in the art to employ such a regimen instead of continuous dosing, for a variety of reasons such as, toxicity, the condition of the patient, patient reaction and amelioration of the disease condition, etc., it would have been obvious to one of ordinary skill in the art to adopt an alternate day dosing and administer IFN as shown by Cummins. It is worthwhile to note that even though Sobel teaches the same amounts, patentee states that the precise amount will depend on the judgement of the attending physician based on considerations of age, weight and condition of the patient.

***Response to Amendment***

Art Unit: 1761

Applicant's arguments filed 11/03/03 have been fully considered but they are not persuasive.

Applicant's entire discussion of Sobel is based on the fact that the examples "do not provide an enabling disclosure for oral administration", that patentee's statements are broad and that Sobel does not provide for oral administration "for ingestion".

Discussions of enablement in an issued patent and discussions pertaining to "ingestion upon oral administration" have been adequately discussed in the decision of the Board of Patent Appeals and Interferences and applicant is respectfully referred to those parts of that decision which refer to and address such arguments repeated here by applicant. The reference teaches and claims administering the same compound to treat the same condition, diabetes, in the same way, "oral administration". To distinguish the instant claims from prior art for patentability purposes, based on the limitation "such that the type one interferon is ingested upon oral administration", is unconvincing and unpersuasive, particularly, as the BPA&I decision establishes that, no special meaning for the word "ingest" has been attributed by the specification. As for Sobel not teaching alternate dosing, the rejection is under 35 USC 103 and the basis for such a regimen being obvious has been explained in the rejection itself in paragraph 4, above.

Cummins teaches administering, orally, the same interferon for auto-immune diseases. It would be reasonable to expect the person of ordinary skill in the art to follow the guidelines of Sobel and Cummins, Jr. for dosing.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1761

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
